Project MINE-EMI (co-founded by the Erasmus+ Programme of the European Union) focuses at the elaboration of a Joint Master Program (JMPs) that will facilitate developing skills and competences to raise awareness on emerging maritime issues in order to promote sustainable management of the maritime sector.

It focuses on the Black Sea basin and involves representatives from the business sector and local administrations in order to fill the gap between the requirements in the maritime sector (management of marine areas, transport operations, logistics) and the current lacking of updated courses in that matter.

The project implementation is based on the progressive model, including preparatory activities, development, testing and the finalization of the JMP. In the development phase, educational material will be elaborated, collected, evaluated and selected, satisfying the criteria set by the stakeholders.
The project aims at the:

- **promotion** of the quality of education and training in the Maritime Education and Training (MET) sector to address the specific maritime challenges and prepare the future managers and experts applying innovative methods, practical oriented approach and e-learning models;

- **facilitation** of the mobility for students and teachers, involving educational and training institutions that wish to contribute in overcoming these challenges

- **cooperation** between MET organizations and industry in the field of education and training for managing the issues in the maritime sector for upgrading competencies and adapting to the requirements of the maritime industry.

The successful implementation of the Project will provide the consolidation of the efforts of the maritime institutions especially in the Black Sea region to contribute to the sustainable development through implementation of blue growth, green transport, maritime spatial planning policies and common maritime basin strategies.
